

ON TRACK LEVEL

Paper 8986/4289

ICT Starters

General

There has been a marked improvement in the last year in the quality of submissions for Cambridge ICT Starters, with fewer mark changes by the Moderator. Most Centres who enter candidates for certification regularly are now comfortable with the requirements of the syllabus and prepare candidates well. It has been pleasing also to see a good number of new Centres making submissions for certification for the first time. This year has seen an increase in the number of entries using the Cambridge International Examinations' papers, and this allows Centres to focus more on the accurate marking of candidates' work. However, some Centres do continue to use their own assessments very successfully - although these should always be checked against the CIE assessments to ensure they allow candidates to demonstrate all the required evidence.

There are still some differences, however, between some Centres who spend time ensuring that their submissions are well prepared for moderation and others who present a less clear picture of how their candidates have been assessed and how the work has been marked. This leads to additional requests for information/further samples and can delay results. In particular, newer Centres should ensure that they have included all the required evidence and, if they are unsure about anything they might need to include, they should ask via the ICT Starters discussion group – cie-starter-ca@lists.ucles.org.uk

A small minority of Centres still do not understand that candidates have to achieve **all** Pass learning objectives to gain a Pass and **all** Merit learning objectives to gain a Merit. Indeed, many queries received by Cambridge about assessment and moderation are addressed in the syllabus. Centres are advised to consult this document carefully.

Centres on the whole continue to enter candidates for the Stage 1 certificate first before the full certificate, with most entries now being made in two separate stages. Initial Steps and Next Steps Stage 1 continue to be the most popular modules, although there has been an increase in entries for On Track this year.

Preparing candidate work for submission to CIE

Centres need to ensure that it is obvious to the Moderator why particular marks have been awarded.

- The **assessment tests and teacher's 'answer copy' should always be included** with the candidates' work.
- It is **often helpful to include a note of explanation** with candidate submissions to ease the moderation process and ensure that the Moderator does not miss elements of the candidate's work. This is also an extremely useful way to explain why a Pass or Merit has been awarded if it is not immediately obvious.

Please ensure all documents are clearly labelled. In addition, care should be taken to ensure that the marks recorded on the candidate entry form are the same as those on the work itself. Finally, the entry form should indicate which candidates' samples have been included with the submission. If Centres are entering work for different certificates, e.g. some candidates for Stage 1 and some for the full certificate, it is always advisable to use separate entry forms, so that there is no confusion.

Electronic submission of work

More Centres are now submitting work electronically on CD-ROM (floppy disk is not permitted) but **all electronic files must be in pdf or jpeg format**. This means that word processed documents, spreadsheets etc. need to be scanned electronically before submission. Other files will not be opened and cannot be considered for moderation (with the exception of a generic video file for the Video for a Purpose module). This avoids any changes in formatting etc. caused by different versions of software and, indeed, the Moderator may not always have access to particular software Centres have used in the assessment tests.

Particular care should be taken to ensure that files are clearly labelled if submitting work electronically. **There should be a separate folder for each candidate in the sample and additional folders within each candidate folder for each module.** Additional thought should be given to the filenames that candidates are asked to give to saved documents in their assessment tests.

Some Centres have submitted work partly in electronic form and partly in hard copy. This can sometimes make it hard to locate the evidence for particular candidates and Centres are advised to send work **either in hard copy or electronically, but not a mixture of both.**

Designing assessment tests

Centres should continue to ensure that assessment tests give candidates the opportunity to produce evidence of their having achieved all Learning Objectives as stated in the syllabus. In some cases, teacher evidence is allowed. A note to this effect should accompany the work, initialled by the teacher. Where possible, tests should be authentic, giving candidates a 'real' experience of using ICT for a specific purpose.

For Centre-designed assessment tests, it is helpful to show which learning objective each question is intended to assess.

Care must be taken not to prompt candidates too much. They should be asked to carry out a task, broken down into individual steps, but not told what icons to click or what to select from the toolbar menus. A small minority of Centres try to design assessments with a numerical marking system. This is not helpful when the final marks awarded to candidates will be Pass or Merit.

However, it is noticeable that candidates perform better and there are fewer mark changes when Centres have used the Cambridge International Examinations' papers. Using these ensures that candidates will be assessed in all learning objectives.

It is permissible to make changes to the Cambridge papers to comply with local settings, lesson content etc., but great care must be taken to ensure they still test all the learning objectives.

Module specific advice

Documents for a Purpose/Multimedia for a Purpose/Video/Animation for a Purpose

As was mentioned on last year's report, a weak area with many candidates is describing how their work addresses a particular audience. Centres should try to encourage candidates to think more carefully about the audience for their work throughout their course and help them to develop ways to explain more clearly how their choices in colour, text, font, layout etc. impacts on or appeals to that audience. This is not easy for young candidates, so they need plenty of practice in class. Care should also be taken that documents produced are 'authentic' and fit for purpose, without too much text on each page/slide.

Care must be taken to differentiate candidates between Merit and Pass in this area.

Spreadsheets for a Purpose

Candidates must design a spreadsheet from a brief given, not simply be given a spreadsheet model to work with.

Control for a Purpose

Centres must supply evidence of candidates having used Control software or devices. Flowcharts show evidence for LO1 only and this is not sufficient. Candidates should be given practice at evaluating and improving their control system, realising its limitation compared with a real system.

Website Design for a Purpose

For LO5, two specific elements on the page should be given for which candidates have to identify the HTML code.

Networks for a Purpose

Network diagrams should be labelled clearly, stating the purpose of each element.

Video/animation for a purpose

For video, storyboarding and filming can be done outside of the allotted assessment time, but the storyboard must still be included. Centres must supply a video file of the final video produced (or screen shots of the animated gif for animation), along with the candidates' storyboards. Also, there must be evidence of the music or narration which was used for the video or animation. Ideally, evidence for this module should be submitted as an electronic file.
